Hedera:

Hedera is a next generation blockchain technology that's accessible from familiar programming languages like Java and JavaScript. Their goal? To make Web3 development even more accessible to hackers like you! Build a project on Hedera's test network for a chance to win amazing Compact Mechanical Keyboards for you and your team!

- Build a decentralized application on Hedera using our JavaScript SDK.
- Build applications that never sleep using EVM compatible smart contract service.
- Say goodbye to cumbersome databases and hello to seamless scalability of Hedera Consensus Service. With no need for writing your own APIs your data is securely stored and easily retrieved.
